

1. (Original) A blow molded article which is a bottle molded from a composition comprising a randomly branched aromatic polymer said randomly branched aromatic polymer comprising:

- (1) a carbonate precursor.
- (2) a dihydric phenol; and
- (3) 1,1,1-tris-(4-hydroxyphenyl) ethane as a branching agent;

wherein said branching agent is present in said polymer in a quantity ranging from about 0.28 to about 0.36 mole percent based on the amount of said dihydric phenol present in said polymer.

2. (Original) An article in accordance with claim 1 wherein the bottle is adapted to contain one gallon of liquid.

3. (Currently Amended) The bottle of claim 1 wherein the carbonate precursor comprises phosgene [bisphenol-A].

4. (Original) The bottle of claim 3 wherein the branching agent 1,1,1-tris- (4-hydroxyphenyl)ethane is present in an amount ranging from about 0.30 to about 0.34 mole percent based on the amount of said dihydric phenol present in said polymer.

5. (New) The bottle of claim 1 wherein the dihydric phenol comprises bisphenol-A.
